DC

Hi Mike,

The crew have flown 2 flights this morning. The first flight 2 lines (120kms) were acquired before the aircraft returned to base to allow some adjustments to the ECU (temperature control unit). Post adjustment on the second flight the pilot aborted the flight after acquiring 4 lines (240kms) due to the incoming weather. I have attached an image from the pilot (OzRunways) showing the rain front and a snapshot from Windy.com of the afternoon forecast. There will be no afternoon flying so a half day (0.5) standby will apply.

Please note the accepted kms are provisional until the QC is completed by processing.

Client Update	
Date:	24/Nov/21/Wed
Project Number:	902212
Client:	Geoscience Australia (GSQ)
System ID(s):	ZKG Feynman
Operating Base:	Cloncurry WA
Block Name:	Canobie
Project Size (Km):	4712
Pilots:	George Warner
Technician:	James Levarre
Crew Onsite:	JL, GW
Daily Km Flown:	367.2
Daily Km Accepted:	367.2
Daily Km Rejected:	0.0
Total Km Accepted / Remaining:	367.2 / 4345.2
Percent Complete:	7.8%
Standby	0.5 day / 0.5 total standby days to date
Daily Notes:	F002 aborted due to ECU (temperature control) current draw F003 aborted due to weather

	aborted due to weather
Safety Notes:	nil
Maintenance:	Aircraft acquisition system, ECU settings adjusted to local environment post F002 (morning flight)

Aircraft	VH-ZKG
Flight	002
Crew In-Flight:	GW
Aircraft Hours	2.0
TakeOff time:	711
Landing time:	911
Weather (degC/vis):	Mid lvl OVC , LT showers
Km Flown	122.4

Aircraft	VH-ZKG
Flight	003
Crew In-Flight:	GW
Aircraft Hours	2.7
TakeOff time:	1034
Landing time:	1315
Weather (degC/vis):	34 High OVC (inbound storm)
Km Flown	244.8

Kind Regards,
Denis
